Dear Mr. Jensen:

This is a short note to inform you that *Mt. Nebo Scientific, Inc.* has attained a tentative agreement with Rockwell Construction Products to update their current NOI.

First Priority

Our priority at this time is to create a map showing the current mining operations boundaries as well as disturbed areas. Our goal is to have this map to you by February 28, 2005 (unless an additional on-site survey is deemed necessary; in that case I will inform you accordingly).

Second Priority

Our next priority will be to create a map showing the company's 5-Year Mining Plan. Our anticipated completion date for this map is March 18, 2005.

Next Priorities

Other mapping including surface facilities, ownership, soil resources, vegetation, reclamation techniques, post reclamation configurations.

In addition to the mapping, verbiage in the NOI will be updated to reflect the present, as well as future, mining operations of the site and other language to explain any changes to the aforementioned new maps and permit area changes.

Your patience to submit information in behalf of the quarry has been much appreciated.

Thank you,

Patrick Collins
